

Controlled project

A unique platform that pays users for activity

Travel with comfort

Discover new places

Share experiences

Earn by posting reviews

daGama – is a blockchain platform that serves as a hybrid of a social network and a rating system for the tourism industry. The platform brings together travelers and businesses into a single platform via web 3.0 technology with user content monetization.

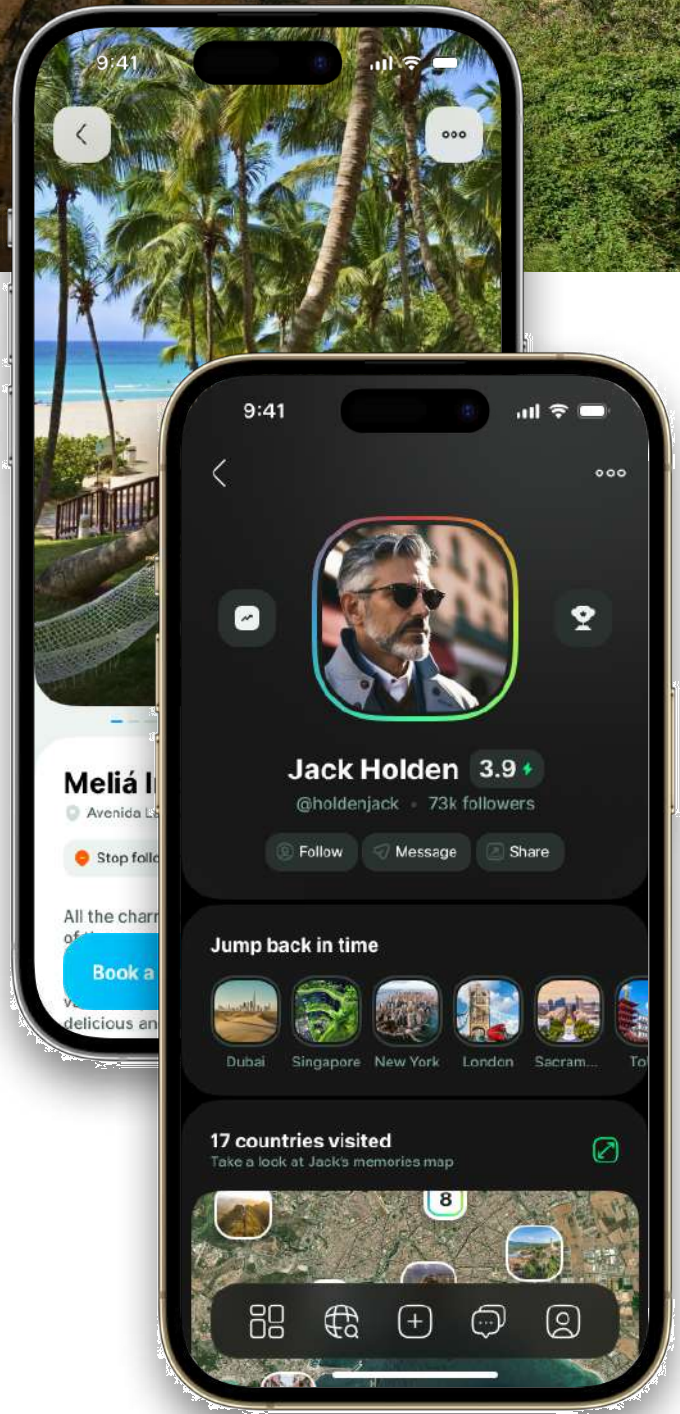

daGama

DaGama was created with an intention to allow users to access high quality content associated with visiting any place in the world.

We combine travelers, locations and businesses. From now there is no need to search for reviews online, analyze outdated prepaid travel guides. All you need is to install DaGama and type your request.

No fake reviews, no ready-made solutions, no imposed services - feel at home wherever you go.

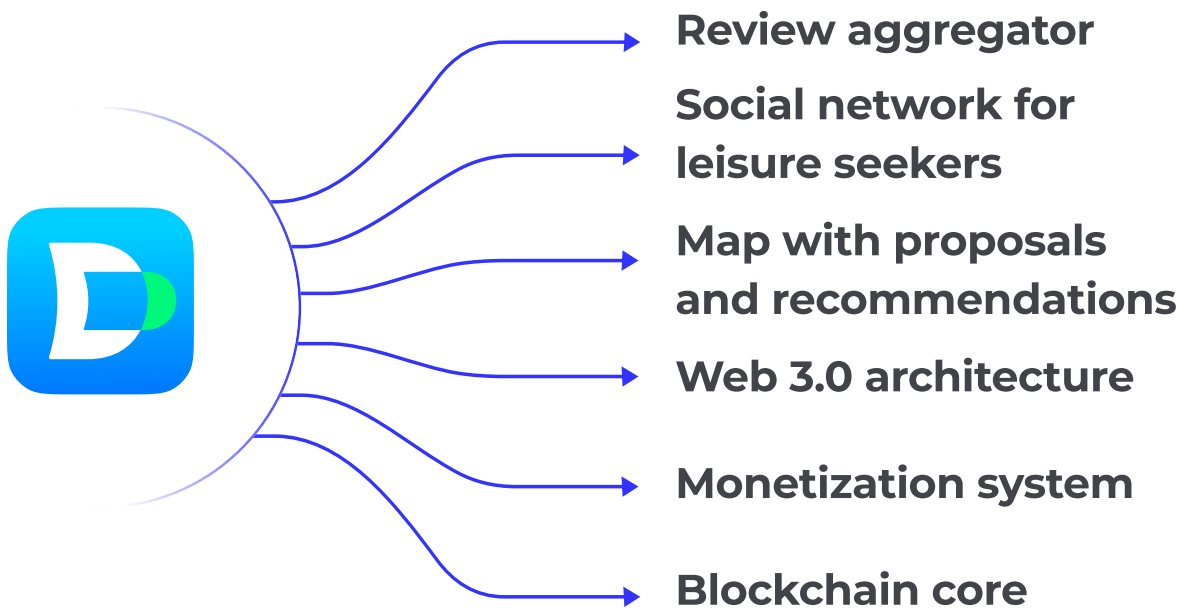

Released on IOS and Android

The application is already available for testflight

What is DaGama?

For users

- Single app for searching and booking services
- 7 step security system for review verification
- Blockchain based content monetization system

For business

- Smart recommendation system and service filter on the map
- Only real visitors and users can leave reviews
- No hidden payments inside the app

Problems related to recommendation industry

93%

of the surveyed users are guided by reviews on the Internet

75%

users do not trust these reviews or consider them fake

38%

of users prefer specialized platforms (TripAdvisor, iRecommend), the rest — read reviews on the websites of service providers

56%

of businesses do not respond to user reviews because they do not consider these reviews fair and honest

What does the decision making cycle look like?

16%

Choose ready-made solutions because they can't make decisions independently

24%

Choose holiday within their own country, because they are afraid of the risks of going abroad

Pains that daGama will solve

Most users really lack honest detailed reviews on websites they can trust.

Users continue to spend great share of effort and time relying on low-quality and fake reviews.

Conclusions based on market analysis

Conclusions and decisions made based on unreliable sources are often disappointing

1 Pain

There is no platform that objectively verifies the quality of services provided.

2 Pain

Business is not interested in developing customer feedback, because it is inefficient with the existing tools.

3 Pain

None of the applications solve the main request of the user - planning leisure time with the expected result.

0.035 \$

Current price per token

Full utility

daGama token is used inside the application to pay for business services.

An investment tool for investors on private rounds and exchanges, and is used to monetize activity in the application.

Pay for any service

User has the ability to easily withdraw the token from the app

to the wallet and manage the token at their own discretion.

Why will daGama token rise in value?

The token distribution model for activity in the application is based on the P2E (Post to Earn) system. In other words, the user generates more tokens than one can take and withdraw.

Start in low market

Every 4 years, the main "index" of cryptocurrencies, bitcoin, has a 2-fold increase in the cost of mining (halving). Therefore, as a result, the price of Bitcoin increases.

The next halving is expected to take place in April 2024, the cost of mining will reach \$ 30,000. By the

end of 2025, the price will rise to a new all time high.

When the project is listed on the exchange in Q1 2024, the investor receives an increase in the asset price due to the growth and development of the project and additionally the market itself will give multiple price increases.

daGama marketing strategy

There are two communities: crypto community and app users

1. App users: those who purchase premium subscriptions
2. Audience of the crypto community

500k

Target audience of the community by Q4 2025

Stages of the deal

How to enter the deal

1. Install wallet.

Personal manager helps with the wallet installation process for token storage.

Only you have access to your wallet and your assets.

2. Agreement with SeedHunters for consulting services.

3. You and daGama sign a token sale and purchase agreement.

4. You purchase daGama token in exchange for USDT and receive the token to your wallet.

If necessary your personal manager may assist you in purchasing USDT.

At the time of the purchase you and daGama sign an Act of Transfer and Acceptance in relation to the transfer of digital assets.

5. daGama digital assets are stored in your wallet until 1Q of 2024.

How to exit the deal

1. A week before listing your personal manager will get in touch and assist you with opening an account on the exchange.

2. Personal manager will offer recommendations on when is best to sell tokens in order to maximize profit.

3. Personal manager will assist you in withdrawing USDT from the exchange to your wallet and if necessary to your bank account.

4. You transfer 10% of your profit as a reward fee to SeedHunters wallet.
